

In The Club House

(continued from page 37)
MSRP: \$176.00

Colors: Black/Watermelon-White;
Light Taupe/Birch-White; Purple
Slate/Blue Ice-White

Imagine A Golf Cart Bag that turns YOU on

Imagine not having to hunt for your wedge amidst the golf club tangle that has plagued golfers for ages. Imagine a golf bag that holds clubs firmly in place. Imagine a golf bag that, with the flick of a finger, turns to present your wedge to you, your 5 iron to you, your 3 wood to you, or any of the other devils to front-and-center.

The **Revolver Pro** from **Bag Boy** is one the two most unique golf bags I've had the pleasure of using in my 15+ years in the golf product review biz. The **Revolver Pro**, and **Revolver** bag actually enables one to rotate the top of the bag to present any club one needs to execute the perfect shot. And no tangled shafts either. Each club slides comfortably into its own full-length divider. The **Revolver Clip-Lok** technology even keeps each club snapped

into a locking position which prevents club head damage while driving carts as

if one was Jeff Gordon in second place at the Indy 500. The **Revolver Pro** even includes a functional removable cooler pocket to keep drinks and snacks chilled during your round. Jeez. What more could one want?

I suggest visiting their web site to discover all of the 14 features: www.bagboy.com. Bag Boy's product lines also include: Electric Carts; Push Carts; Pull Carts; Cart Bags; Stand Bags; Travel Covers; Accessories; and if you want everyone to know who you are... customization. The

Revolver Pro goes for \$229.95 and the **Revolver** for \$219.99.

Now You Can Sport The Very Same Sun Glasses that guy who won a 2008 Major Golf Championship with one leg tied behind his back did. **TAG Heuer 27 degree AIR Sunglasses** are now available to everyone. Their newest high-tech sunglasses are 180 degrees from the ordinary. Called 27 degree AIR because of the angle at which the arms fold along their innovative, solid titanium hinges, these new sunglasses feature single-frame design and 18 interchangeable shields – one for each hole on the course. In fact, these glasses are designed with you, the golfer, in mind.

They combine feather-weight construction (you will forget that you are wearing them) and full 180° coverage, for hours of comfortable sun protection without distraction. One of my favorite benefits is that these sunglasses are designed without a bottom rim, providing uninterrupted downward vision.

Made from shatter-resistant, ophthalmic-quality Makrolon polycarbonate, 27 degree AIR lenses come in three shapes and six varieties. Golfers will enjoy the contract-enhancing, glare-reducing Polarized Brown Precision shield. Likewise, the Photochromic Prime Shield varies its light-blocking based on ambient light, letting you move from an early tee time
